

Looking to replace phenolic biocides?

Look no further.

Teknon Biocleanse kills... and kills fast.

With the Biocidal Products Regulations outlawing many of the tried and tested biocides currently available, there's real demand for a trusted replacement.

Teknon Biocleanse answers the need for an effective cleaning solution with proven efficacy against a wide spectrum of pathogenic microorganisms. This makes Biocleanse the product of choice where combinations of soils and pathogens exist. It is safe to use on ferrous and non-ferrous metals, ceramics, glassware and plastics.

Many disinfectants are unable to penetrate oils, fats and protein based materials and cannot disinfect effectively in areas where these are present. Biocleanse cuts through contaminants, lifting them from surfaces and leaving a physically clean and disinfected surface in a single operation.

Of particular importance is TB. Biocleanse has proven efficacy against *Mycobacterium tuberculosis*, tested at the Hospital Infection Research Laboratory. (www.teknon.co.uk/news). Biocleanse met the test requirements in less than one quarter of the allowed time scale and there was no reduction in kill rate when tested with a protein challenge!

Teknon Biocleanse has the power to protect you from a wide range of biological hazards that also include MRSA, HIV, C diff, HBV, E coli, Salmonella, Listeria, Candida, Penicillium and Avian Flu. And all in a formulation that's safe and easy to handle too.
