

TEKNON BIOCLEANSE[®] – CERTIFIED EFFICACY AGAINST H1N1 SWINE FLU.

Teknon Biocleanse[®] is one of the first disinfectant products to be independently tested and certified by the Veterinary Laboratories Agency in killing the H1N1 strain of Swine Flu.

Biocleanse[®] is widely used within the NHS Pathology Departments, in Category 3 Laboratory Environments, Emergency Services, Mortuaries and the Dental Profession, where the need to contain the most harmful pathogens is paramount.

Biocleanse[®] is safe and easy to use on almost all work and household surfaces, is alcohol and chlorine free and crucially, is a combined cleaner and disinfectant, making it the ONE product you need to remove the dirt you can see and the pathogens you can't.

Teknon Biocleanse[®] delivers effective cleaning with proven efficacy against a wide spectrum of pathogenic micro-organisms including bacteria, viruses, spores, moulds and fungi.

The latest certified efficacy against the H1N1 strain of swine flu is yet another stamp of endorsement for this innovative formulation.

Peter Bacon – Teknon Technical Director states;

"We fully support the advice of DEFRA and the Veterinary Laboratory Agency in obtaining proven H1N1 Swine Flu efficacy as opposed to assuming efficacy based on testing of similar viruses.

At a time when the public has a heightened awareness of this issue, it is important that we can demonstrate clear and validated third party evidence to substantiate our claims.

We fully support the Government's approach of catch it, bin it, kill it, but cleaning hands alone may not be sufficient in the fight against swine flu. It is well known that hard surfaces contribute to the transmission risk of harmful pathogens. We have now proved that the formula of Teknon Biocleanse[®] is effective in killing the H1N1 Swine Flu Virus on contact and can therefore contribute to a reduction in the risk of infection."

Teknon Biocleanse[®] is available in a 5 litre ready-to-use container, 500ml trigger sprays and disposable impregnated wipes.

Teknon Biocleanse[®], proven effective in the fight against Swine Flu.
